

8rain Station[®] EV Checker

COMPLETE SETUP & EXECUTION GUIDE FOR DEVELOPERS & AI MODELS

1. Executive Overview

The **8rain Station[®] EV Checker** cross-references quantitative sports prediction CSVs against real-time live odds from **Kalshi** and **Polymarket** REST APIs. It automatically calculates **EV Edge %**, **½ Kelly bet sizing**, and handles complex **spread underdog side inversion math**.

2. Available Execution Modes

Execution Mode	Tech Stack	Launch Command
Mode 1: Python Flask (Recommended)	Python 3.9+, Flask	python app.py (Open http://localhost:5001)
Mode 2: Web App (GitHub Pages)	HTML5, JS, CSS	Open index.html in browser
Mode 3: React Dashboard	React 19, Vite, TS	npm install & npm run dev

3. Verification & Automated Testing

Run the automated test suite to verify Kalshi and Polymarket line matching:

```
pip install -r requirements.txt
python test_pipeline.py
```

4. 11-Column CSV Format Specification

```
LEAGUE, DATE, HOME, AWAY, DOUBLEHEADER, SECTION, MARKET, SELECTOR, POINT, SIDE, WIN %
MLB, 20260922, BAL, TOR, 0, spread, spread, BAL, 1.5, BAL, 0.687
MLB, 20260922, LAD, SD, 0, spread, spread, LAD, 1.5, LAD, 0.695
NFL, 20260927, PIT, CIN, 0, head_to_head, h2h, PIT, , PIT, 0.626
```

5. AI Model Setup Prompt (Copy & Paste)

"I have extracted the 8rain Station EV Checker package.

1. Install dependencies: **pip install -r requirements.txt**
2. Test line matching pipeline: **python test_pipeline.py**
3. Launch server: **python app.py** and open **http://localhost:5001** to view live Kalshi & Polymarket odds."
